

# Zach Hewett

Online Portfolio: <https://zachhewett.github.io/Portfolio/>

Hi, I'm Zach, a Lighting Artist with over five years of experience. I've shipped Need for Speed Unbound, and multiple live service releases for both Star Citizen and EVE Vanguard.

I've worked as part of a six-person-strong lighting team, and all by myself - so I can back-up an existing team or be the driving force behind the lighting for a project.

Very technical work is well within my capabilities, I've built lighting tools to improve workflows and save entire lighting setups as reusable presets. I've also worked closely with rendering engineers to improve custom GI tech and tune scalability settings to meet performance targets.

I do this job because I love games, and using lighting as an art form to elevate them.

## Experience

Lighting Artist **Dec 2022 - Present**  
**CCP Games**

- The sole lighting artist on the EVE Vanguard project, working closely with the Art Director and Game Director to deliver a bold, cinematic experience that facilitates fast-paced FPS gameplay.
- Overseeing the project transition to Unreal Engine 5, optimising for Lumen and Virtual Shadowmaps, to achieve a smooth 60 fps experience on target hardware.

Associate Lighting Artist **Jan 2022 - Dec 2022**  
**Criterion Games**

- Responsible for lighting large sections of the game's open world environment, from initial creative exploration through to final optimisation and bug fixing
- Team specialist in our novel, in house GI solution, working closely with rendering engineers to solve problems, improve GI quality and streamline the workflow for artists

Lighting Artist I **Feb 2021 - Jan 2022**  
**Cloud Imperium Games**

- Responsible for translating concept art into in-engine environment lighting. Including interiors, exteriors and atmosphere/sky lighting
- I worked on a number of releases for this project in styles ranging from grand, spaceship showrooms to gritty forges in the asteroid belts of contested areas

Realtime Lighting Artist **Oct 2020 - Feb 2021**  
**Nexus Studios**

- Working closely with Technical Artists to reproduce stylized art direction in a PBR-focused game engine.
